	1.	The Justerbog-Altos Lager (N 52/E 69) airfield was observed between	
		9:30 s.m. and 1:30 p.m. on 13 March 1951 from its eastern and southern edges. About 25 twin-engine low-wing aircraft with double rudder		
i jedija s		assembly, three twin-engine semi-high-wing monoplanes with nose wheel,		
	8	and two biplanes were parked on the landing field in front of the		
	9.9	hangars, some of which were open. * No planes were seen in the open hangars. There was flying with three semi-high-wing monoplanes and one		
	44	low-wing plane. **		
	2.	The twin-engine low-wing monoplane	and two suspended in-line engines	
	~ *	with small propeller hubs, nose pro;	jecting beyond ongines, mounted two-	
		seater cockpit with strong antenna i	od and machine gun pointing upward firing downward to the rear. The upper	
		portion of the plane was painted gre	een, the lower portion was painted blue.	
		No number was seen on the rudder ass	sembly, but there were yellow stripes	
		on the undersides of the wings. *		
	3.		plane had gull wings when seen from the	
		front, rounded wing tips, four lands extending from aileron to fuselage,	plexiglass nose with mounted pilot's	
		seat, plexiglass cabin on top of fus	selage behind pilot's seat, machine	
	4		th sides of fuselage, nose wheel, main acclle, wheels fitted at outer side of	
		single-strut landing gear, large and	suspended radial engines with small	
	propeller hubs probably not controllable, rump of engines projecting beyond trailing edges of wings, straight elevator assembly mounted on double rudder			
da de la		assembly which is almost square shar	ded, no armament. All three planes were	
	painted green. The first plane had the white number 2, the second one had			
		the number 34, and the third plane h	and no number. *	
	4.	The semi-high-wing monoplanes used	about half of the runway for taking off	
	and about two thirds for landing. They made large left turns of about 6 to 12 minutes over the field. The twin-engine low-wing monoplane used a take-off			
		run which was slightly longer than that used by the semi-high-wing mono-		
		planes. They also practiced local fi	lying. Three twin-engine low-wing planes	
, 1	. *	1.0

CONFIDERATION OFFICIALS ONLY 25X1A

made long flights between 11 a.m. and 12:30 p.m. Flying lasted until 1:30 p.m. At 11:15 a.m. and at noon, respectively, one single-engine low-wing plane landed at the field. The plane, probably of IA type, had double radial engine, trapezoidal wings with rounded tips, plexiglass two-seater cockpit with seats arranged in tandem fashion, oval rudder assembly and antenna rod on top of cockpit.

- 5. About 50 men were excavating about 600 meters west of the western end of the runway. There were three or four construction sheds and about 20 to 30 dumpears. Narrow-gauge field railroad tracks were laid. The woods was cleared as far as about 1,000 meters west of the hard surface runway.
- 6. As observed previously, the braced radio mast about 10 meters high was north of the western end of the runway, the radio installation with four masts was on the southern edge of the landing field, and a guard detail of about 4 to 6 men was quartered in a civilian house 300 meters from the radio installation. Passenger car was seen going to the airfield. 25X1C

25X1A

**Comment. The description of the low-wing aircraft indicates that the planes were of PE-2 type. The description of the seni-high-wing fits the B-25.

The presence in Jueterbog of some aircraft of this type was 25X1C whether a bomber regiment in Jueterbog has been re-equipped with aircraft of this type or whether such aircraft are stationed there temporarily. The information that a machine gunner's station is on top of the fuselage just behind the pilot's seat is new.
